Accepted Meat and Poultry Equipment

Introduction

The Federal Meat Inspection Act and the Poultry Products Inspection Act require meat and poultry to be slaughtered and processed under sanitary conditions. To meet this requirement, the Secretary of Agriculture is authorized to develop regulations which apply to the sanitation of facilities and equipment in federally inspected plants. These regulations are published in the Code of Federal Regulations.

The responsibility for reviewing plant equipment, including the materials used in constructing it and the provisions for keeping it sanitary during its intended use, is assigned to the Equipment Group, Technical Services. The group is part of the U.S. Department of Agriculture's Food Safety and Inspection Service, the agency which administers the inspection program.

Equipment Acceptance Program

The purpose of the Equipment Acceptance Program is to assure that equipment used in federally inspected meat and poultry plants is properly designed and constructed for sanitary use. The Equipment Group, however, will not accept equipment that does not meet certain agency requirements for operation and output.

The focus of the Equipment Acceptance Program is on correcting problems in equipment while it is being developed rather than after it is put into use. As a result, equipment manufacturers, processors, inspectors, and consumers benefit.

Equipment brought into official establishments must be formally evaluated and accepted by the Equipment Group before it can be used on a regular basis in the production of edible products. This applies to both new and used equipment.

In the case of equipment already in use in a plant, the evaluation can be made by the inspector-in-charge. The equipment must be shown to produce an unadulterated product and must be able to be kept sanitary. The following categories of equipment do not have to be submitted to the Equipment Group for formal acceptance if constructed, installed, and maintained in a manner acceptable to the inspector-in-charge:

1. Simple hand tools.
2. Equipment used to prepare packaging materials.
3. Equipment for handling or transporting packaged goods.
4. Equipment used in inedible departments.
5. Central cleaning systems.
6. Utensil and equipment cleaning machinery.
7. Pails, buckets, etc. (chemical acceptance for plastics, if used).
8. Pallets for packaged product.
9. Picking Fingers (chemical acceptance only).
10. Tanks for finished oils.
11. Can openers.
12. Chutes, flumes, poultry hangback racks, supporting stands, and brackets.
13. Equipment used for storing, transporting, and refining rendered animal fats and vegetable oils.

14. Vegetable cleaning equipment.
15. Insect control units.
16. Shipping containers (to be approved by Labels and Packaging Staff, MPIP, FSIS, USDA, Cotton Annex Building, Washington, D.C. 20250).
17. Pressure storage vessels for refrigerants.
18. Water softeners, water heaters, water meters, and chemical dispensers.
19. Can and jar washers/cleaners.
20. Dry spice mixing equipment.
21. Hot air shrink tunnels.
22. Equipment for handling live poultry and meat animals.
23. Air and water filters.
24. Temperature recording equipment (chemical and sanitary acceptance of product contact components only).
25. Casing preparation equipment.

Plants Entering the Federal System

Equipment installed in existing plants at the time Federal inspection is inaugurated does not need to be approved through formal acceptance procedures if it is in good repair and is installed and maintained in a manner acceptable to the inspector-in-charge. Equipment intended for use in newly constructed plants either must be on the List of Accepted Meat and Poultry Equipment at the time inspection is inaugurated or it must be installed on an experimental basis under special permission from the Equipment Group.

Custom-made Equipment

Many plants make some of their own equipment or have it fabricated to their specifications. Simple equipment in this category, such as racks and skinning cradles, need not be submitted for formal acceptance. It must, however, meet the standards stated in this guidebook. More complex equipment, such as conveyors, mixers, and packaging equipment, must be approved by the Equipment Group even though it is custom made for the plant and not intended for sale or lease to others. The Equipment Group will evaluate such equipment using the same standards that apply to commercially made equipment. Plants must submit the same information (drawings, list of parts materials, etc.) as must be submitted for commercial equipment. The custom equipment, however, will not be included in the List of Accepted Meat and Poultry Equipment.

Transfer of Used Equipment Between Plants

Equipment that has been used in a federally inspected plant may be moved to another federally inspected plant under the same ownership without formal acceptance, providing it is in good repair, can produce unadulterated product, and is installed and maintained in a manner acceptable to the inspector-in-charge at the receiving plant.

Bakery Equipment

Equipment installed in processing departments to prepare dough and crust for filling or fabricating operations must be formally evaluated and accepted. However, equipment used in separate rooms for preparing bakery type items need not appear on the List of Accepted Meat and Poultry Equipment. The inspector-in-charge will judge whether such equipment is constructed and maintained in a manner that will assure production of unadulterated product in a clean environment. The standards for evaluating meat and poultry processing equipment may not all apply to equipment used in bakery departments since such equipment may not require daily washing to be maintained in sanitary condition.

Procedure for Obtaining Acceptance of Equipment

Anyone interested in securing acceptance of equipment for use in meat and poultry plants should provide the Equipment Group with drawings clearly illustrating the main construction features of the equipment. These usually include side, end, and top views. More complex equipment will also require section or cutaway drawings showing internal product contact parts. Each submitted must be accompanied by a list, correlated to the drawings, showing the materials used to construction each part. Any part that is plated should be so annotated and the type of plating material specified. If paints or plastics are used, they must be accepted by the Chemistry Staff, Science Program. The drawings and chemical formulas should be sent to:

Equipment Branch
USDA, FSIS, MPITS
Washington, D.C. 20250/

The drawings do not have to be drawn to a specific scale. However, they should not exceed 32 by 48 inches in size because they are converted to microfilm, and this is the largest size the microfilm equipment can handle.

After receiving a submittal, the Equipment Group reviews the information presented to determine (1) if acceptable materials are used, (2) if there are design, construction, or safety problems that must be corrected, and (3) if observation during use in a plant is necessary to determine acceptability.

If a production trial is considered necessary for observing the equipment during in-plant use, the equipment manufacturer should ask the plant to request permission of the Equipment Group for use of the equipment on a trial basis. The inspector-in-charge at the plant will be notified if permission is granted and will evaluate the operation of the equipment and report the findings to the Equipment Group. If the report is favorable, the company will be permitted to continue use of the machine after the experimental period is completed unless notified otherwise by the Equipment Group. If sanitary or safety problems are identified during the trial period, they must be corrected before continued use is permitted.

If the equipment has performed satisfactorily, the Equipment Group will furnish the submitter a letter of acceptance and add the model to the List of Accepted Meat and Poultry Equipment that is published periodically. If the equipment is not accepted, the manufacturer and user will be advised of the correction needed. The acceptance letter is for purpose of clarifying equipment status prior to its listing. Once the equipment is published in the List of Accepted Meat and Poultry Equipment, the letter written to the manufacturer is no longer valid as an authorization for equipment installation and use in plants.

Freedom of Information Act

The Freedom of Information Act, 5 U.S.C. 552, provides that information in the possession of the Federal Government must be made public upon request unless certain specified exemptions apply. One of these exemptions covers "trade secrets and commercial or financial information obtained from a person and privileged and confidential" (5 U.S.C. 552(b)(4).)

In order to protect the legitimate commercial interests of those submitting information to the Equipment Group, the submitting party should identify all material considered to be either a trade secret or confidential commercial or financial information and supply a statement explaining why it is so considered. While this procedure will not guarantee that the information will be exempt from disclosure, it will insure that the wishes of the submitting party will be given consideration in any decision reached.

When FSIS receives a request for material identified as a trade secret or confidential commercial or financial information, it will not be disclosed without consulting the submitting party.

Questions concerning the Freedom of Information Act and its effect on the procedures of the Equipment Group should be addressed to:

Freedom of Information Act Coordinator
Food Safety and Inspection Service
Room 334-E
U.S. Department of Agriculture
Washington, D.C. 20250

Chemical Clearance

Belting materials, sealants, coatings, paints, metal alloys, and plastics used in manufacturing equipment or components of equipment must be evaluated by the Food Ingredient Assessment Division (FIAD), Science, FSIS, to assure that they are safe for their proposed use. If these items are part of equipment currently under review by Equipment Branch, their formulas should be submitted to Equipment Branch. However, if these items are components of equipment that is not under review, they should be submitted directly to FIAD. In either case, the following information must be provided by the manufacturer when evaluation is requested.

- 1) A brand name, code, part number, or other designation which specifically identifies the material to be evaluated;
- 2) A description of the condition(s) (e.g. temperature, opportunity for food contact) under which the material will be used as a component of the equipment;
- 3) The complete chemical composition of the material. Dyes and pigments should always be identified by their 5-digit Colour Index Constitution number or structural formula. All other major and minor constituents must be identified by proper chemical names. If the material is used in direct contact with food, the constituents should be listed by proper chemical name as they appear in the appropriate Food Additive Regulations (Title 21, Code of Federal Regulations) or by reference to previous acceptance by USDA. If a proprietary formulation is used as an ingredient of the material, that ingredient may be identified by its trade name and manufacturer. The ingredient manufacturer must then submit the chemical composition to FIAD in behalf of the component manufacturer.

Chemical formulations disclosed to FIAD are retained in a confidential file and used only to evaluate the chemical acceptability of the material. Chemical formulations of ingredients used to manufacture equipment components may be submitted directly to FIAD at this address:

Compounds and Packaging Section
Food Ingredient Assessment Division
Science, FSIS, USDA
Bldg. 306, Rm. 300 BARC-East
Beltsville, MD 20705

Use of the Guidebook

The List of Accepted Meat and Poultry Equipment is published periodically for the use of inspectors and plant operators to determine the status of new or replacement equipment intended for use in plants. It may be purchased from the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402.

Formal acceptance of a piece of equipment will not necessarily mean it can be used without reservation. Poor workmanship, inadequate service and maintenance, substitution of materials, faulty installation, or other defects may make an otherwise acceptable machine unacceptable. When such defects can be corrected after installation, the inspector will require correction as a condition for use. Otherwise, the equipment will be rejected and the inspector will report the defects to the Equipment Group.

Use of the equipment may also reveal objectionable defects or faults not apparent when acceptance was granted. If the defects are serious and the manufacturer does not make corrections, the equipment will be removed from the accepted list.

The Food Safety and Inspection Service does not sanction the use in advertisements or promotional material of any shield, emblem, legend, or insignia indicating USDA acceptance of equipment. The only authorized reference to acceptance is in letters issued to applicants and in the List of Accepted Meat and Poultry Equipment. Inclusion in this list signifies the equipment complies with Meat and Poultry Inspection Program sanitary standards. It does not infer compliance with the Department of Labor's Occupational Safety and Health Standards.

Approved equipment is listed by the manufacturers' names and addresses, which are arranged alphabetically. The listing includes the type of equipment and the model numbers which are acceptable. For example:

XYZ Manufacturing Co.
Washington, D.C.
Boning Table: 1000, 1192, 1233

When the model number is followed by a series of dots, the particular piece of equipment may be made in various sizes and capacities with no change in the basic design and construction. For instance, approved conveyor models EC-1218, EC-2435, EC-2060 would be listed in the guidebook in this manner:

Conveyor: EC-....

Equipment Standards

To be considered acceptable, equipment and utensils must meet certain basic criteria. They must be made of acceptable materials, constructed so they can be cleaned and inspected, and designed for sanitary maintenance, and they must not constitute a safety or health hazard to inspectors.

Acceptable Materials

Equipment must be constructed of materials that will prevent deterioration through normal use or by chemicals, cleaning agents, and atmospheric exposure in the normal production environment. They must be smooth surfaced, corrosion and abrasion resistant, shatterproof, nontoxic, nonabsorbent, and they cannot stain or migrate to the product.

1) Stainless Steel: The 18-8 (300 series) is acceptable for general use. Other series have been used for construction of meat and poultry equipment, but their use is limited because they tend to rust or discolor in certain applications. The abbreviation "S/S" is used throughout this publication to denote stainless steel construction.

2) Aluminum: May pit or corrode when exposed to certain chemicals. When friction occurs between aluminum and meat or fat, a black oxide is produced which discolors the meat. Anodizing the aluminum does not eliminate this problem. Therefore, the use of aluminum is limited to applications where the metal does not contact the product or in which the product is suspended in water.

3) Surface Coatings and Platings: Acceptable providing they render the base metal noncorrosive and meet the definition for an acceptable material. Failure of plating materials to remain intact is justification for inspection personnel to require that the use of equipment so affected be discontinued. Such platings as chromium, nickel, tin, and zinc (as galvanized iron) are usually acceptable, depending upon the specific use.

4) Plastics and Metal Alloys: Acceptable when judged by the Chemistry Staff to be suitable for contacting a product and are physically acceptable for their intended use by the Equipment Group.

5) Hardwood: Acceptable when used as removable cutting boards or as removable racks for dry curing meat. Since wood absorbs moisture, it is unacceptable for any other equipment uses.

6) Other Material: As new materials are developed and proposed, they will be considered on their merits.

Unacceptable Materials

1) Cadmium and Antimony: Toxic materials which may not be used in any manner on equipment for handling edible products.

2) Lead: a toxic material which may not be used in equipment contacting an edible product except that it may be used in certain alloys in an amount not to exceed 5 percent.

3) Enamelware and Porcelain: Not acceptable for any purpose in connection with the handling and processing of product.

4) Copper, Brass, and Bronze: Not acceptable when used in contact with fats and oils because their use results in objectionable greenish discoloration and decreases the keeping quality of fat. They may be used in air and water lines and for gears and bushings outside the product zone.

Design and Construction

1) Equipment shall be designed and constructed so that it can be readily cleaned.

2) All product contact surfaces shall be readily accessible for cleaning and inspecting and constructed of corrosion-resistant materials.

3) All surfaces contacting a product shall be smooth, free from pits, crevices, and scale, and shall be capable of being so maintained.

4) All parts of the product zone shall be free of recesses, open seams, gaps, protruding ledges, inside threads, inside shoulders, bolts, rivets, and dead ends.

5) Bearings shall be located outside the product zone and constructed so that lubricant cannot leak, drip, or be forced into the product zone.

6) Internal corners or angles in the product zone shall have a continuous and smooth radius of one-fourth of an inch or greater except that lesser radii may be used where necessary for proper functioning of parts or to facilitate drainage, provided such areas can be readily cleaned.

7) Equipment shall be self-draining or otherwise completely evacuated.

8) Horizontal ledges or frames members shall be held to a minimum outside the product zone and shall be of rounded or tubular construction to prevent accumulation of debris and promote sanitation.

9) Equipment shall be so designed, constructed, and installed so as to prevent injury to personnel from sharp edges, moving parts, electrical shocks, excessive noise, and other hazards. Safety or gear guards shall be removable to permit inspecting and cleaning.

10) All welding shall be continuous, smooth, even, and relatively flush with the adjacent surfaces.

11) Painted surfaces of equipment or components in or above the product zone are not acceptable.

12) All external surfaces that do not contact a food product shall not have open seams, gaps, crevices, and inaccessible recesses.

13) Where parts must be retained by nuts or bolts, fixed studs with wing nuts should be used rather than screws to a tapped hole.

14) Electric motors and other electric gear should be sealed or otherwise protected to prevent entry of water and product.

15) All gasketing and packing material shall be nontoxic, nonporous, nonabsorbent, and unaffected by food products and cleaning compounds.

1) Spacing from Floors, Walls, and Ceilings: All parts of stationary (or not readily movable) equipment must be installed far enough away from floors, walls, and ceilings to provide access for cleaning and inspecting. As an alternative, permanently mounted equipment may be sealed to the adjacent structure with a watertight seal. Wall mounted cabinets and electrical connections must be installed at least 1 inch from the wall or sealed watertight to the wall.

2) Water Wasting Equipment: Water wasting equipment shall be installed so that waste water is delivered into the drainage system through an interrupted connection without flowing over the floor, or is discharged into a properly drained curbed area. Waste water from cooking tanks, soaking tanks, chilling tanks, and other large vessels may be discharged for short distances across the floor to a drain after operations have ceased and a product has been removed from the area.

3) Protection of Water Supply: An air gap shall be provided between the highest possible level of liquids in equipment and water supply pipes. Functional vacuum breakers must be provided in installations where submerged water lines are unavoidable. These must be of a type that can be checked easily to be sure they are working.

4) Valves: Valves on drainage outlet shall be readily cleanable and mounted flush with the bottom of the equipment. Overflow pipes shall be constructed so that all interior and exterior surfaces can be cleaned.

Definitions

In order for these guidelines to be uniformly understood and applied, certain terms are defined as follows:

Accessible: Easily exposed for regular cleaning and inspecting with simple tools such as those normally carried by cleaning personnel.

Readily accessible: Easily exposed to sight and touch for regular cleaning and inspecting without the use of tools.

Removable: A component part can be separated from the principal part with simple tools such as a screwdriver, pliers, or open-end wrench.

Readily cleanable: The equipment can be cleaned with hot water, cleaning agents, and scrubbing implements normally used by cleaning personnel.

Corrosion resistant material: A material which maintains its original surface characteristics under prolonged exposure to the normal environment including product, ingredients, ambient conditions, and cleaning and sanitizing materials.

Acceptable materials: Materials which have been found to be chemically acceptable and physically suitable for the purpose intended.

Sealed: Having no openings that permit the entry of product, dirt, or moisture.

Product Zone: All surfaces of the equipment which may normally be directly or indirectly exposed to product or ingredients.

Nonproduct Zone: All surfaces of the equipment outside the product zone.
